DATE PERFORMED:

DATE SUBMITTED:

NAME:

INSTRUCTOR:

ACTIVITY NO. ____ [ACTIVITY NAME]

1. PROCEDURE OUTPUT

What procedures did you perform?

PART I

Part I – Creating an Empty File

Task

Create an empty file named:

ansible_test.txt

inside your home directory.

Playbook

Create:

emptyfile.yml

Use:

- name: Create an empty file

hosts: all

tasks:

- name: Create ansible_test.txt

ansible.builtin.file:

path: "{{ ansible_env.HOME }}/ansible_test.txt"

state: touch

Execute

ansible-playbook emptyfile.yml

Verify

On the managed node:

ls -l ~/ansible_test.txt

You may also use:

ansible all -m ansible.builtin.file -a "path=\$HOME/ansible_test.txt state=file"

Required Screenshots

Screenshot 1: emptyfile.yml showing your playbook.

Screenshot 2: Successful execution and verification showing that ansible_test.txt exists.

```

iquin@workstation: ~/CPE212_IQUIN

iquin@workstation:~$ cd CPE212_IQUIN
iquin@workstation:~/CPE212_IQUIN$ ls
emptyfile.yml  HOA_6.1  install_apache.yml  README.md
iquin@workstation:~/CPE212_IQUIN$ cat emptyfile.yml
---
- name: Create an empty file
  hosts: all
  tasks:
    - name: Create ansible_test.txt
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/ansible_test.txt"
        state: touch
iquin@workstation:~/CPE212_IQUIN$

```

```

iquin@workstation: ~/CPE212_IQUIN

kipped=0    rescued=0    ignored=0
192.168.56.123 : ok=0    changed=0    unreachable=1    failed=0    s
kipped=0    rescued=0    ignored=0

iquin@workstation:~/CPE212_IQUIN$ ansible-playbook emptyfile.yml --ask-pass

iquin@workstation:~/CPE212_IQUIN$

```

Part II – Creating Multiple Files

Task: Create the following three files in your home directory:

file1.txt

file2.txt

file3.txt

Playbook

Create:

multiplefiles.yml

- name: Create multiple files

hosts: all

tasks:

- name: Create multiple files

ansible.builtin.file:

path: "{{ ansible_env.HOME }}/{{ item }}"

state: touch

loop:

- file1.txt

- file2.txt

- file3.txt

Execute

ansible-playbook multiplefiles.yml

Verify

ls -l ~/file1.txt ~/file2.txt ~/file3.txt

Required Screenshots

Screenshot 3: multiplefiles.yml.

Screenshot 4: Successful execution and verification showing all three files.

```
iquin@workstation:~/CPE212_IQUIN$ cat multiplefiles.yml
```

```
---
```

```
- name: Create multiple files
  hosts: all
  tasks:
    - name: Create multiple files

kipped=0    rescued=0    ignored=0

iquin@workstation:~/CPE212_IQUIN$
```

Part III – Creating a File with Content

Task

Create a file named:

student_info.txt

and place the following information inside it:

Name: YOUR NAME Course: Computer Engineering Topic: Ansible File Module

Playbook

Create:

withcontent.yml

- name: Create a file with content

hosts: all

tasks:

- name: Create student information file

ansible.builtin.copy:

dest: "{{ ansible_env.HOME }}/student_info.txt"

content: |

Name: YOUR NAME

Course: Computer Engineering

Topic: Ansible File Module

Replace YOUR NAME with your actual name.

Execute

ansible-playbook withcontent.yml

Verify

cat ~/student_info.txt

Required Screenshots

Screenshot 5: withcontent.yml.

Screenshot 6: Output of cat ~/student_info.txt.

```
iquin@workstation:~/CPE212_IQUIN$ cat withcontent.yml
---
- name: Create a file with content
  hosts: all
  tasks:
    - name: Create student information file
      ansible.builtin.copy:
        dest: "{{ ansible_env.HOME }}/student_info.txt"
        content: |
          Name: Melquisedec D. Iquin
          Course: Computer Engineering
          Topic: Ansible File Module
iquin@workstation:~/CPE212_IQUIN$
```

```
iquin@workstation:~/CPE212_IQUIN$ nano withcontent.yml
iquin@workstation:~/CPE212_IQUIN$ ansible-playbook withcontent.yml --ask-pass
SSH password:

PLAY [Create a file with content] *****

TASK [Gathering Facts] *****
ok: [192.168.56.123]
ok: [192.168.56.121]

TASK [Create student information file] *****
changed: [192.168.56.123]
changed: [192.168.56.121]

PLAY RECAP *****
192.168.56.121      : ok=2    changed=1    unreachable=0    failed=0
kipped=0    rescued=0    ignored=0
192.168.56.123      : ok=2    changed=1    unreachable=0    failed=0
kipped=0    rescued=0    ignored=0

iquin@workstation:~/CPE212_IQUIN$ ansible all -a
ss
SSH password:
192.168.56.123 | CHANGED | rc=0 >>
Name: Melquisedec D. Iquin
Course: Computer Engineering
Topic: Ansible File Module
192.168.56.121 | CHANGED | rc=0 >>
Name: Melquisedec D. Iquin
Course: Computer Engineering
Topic: Ansible File Module
iquin@workstation:~/CPE212_IQUIN$
```

Observation

What is the difference between using `ansible.builtin.file` with `state: touch` and using `ansible.builtin.copy` with `content`?

- The ansible builtin with the state `touch` only creates an empty file if it doesn't already exist yet, or it updates its access or modification timestamp if it already does.

Part IV – Creating a Directory

Task

Create the following directory:

~/ansible-directory

Playbook

Create:

createdirectory.yml

```
- name: Create a directory
  hosts: all
  tasks:
    - name: Create ansible-directory
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/ansible-directory"
        state: directory
```

Execute

ansible-playbook createdirectory.yml

Verify

ls -ld ~/ansible-directory

Required Screenshots

Screenshot 7: Playbook.

Screenshot 8: Successful execution and directory verification.

```
iquin@workstation:~/CPE212_IQUIN$ cat createdirectory
cat: createdirectory: No such file or directory
iquin@workstation:~/CPE212_IQUIN$ cat createdirectory.yml
---
- name: Create a directory
  hosts: all
  tasks:
    - name: Create ansible-directory
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/ansible-directory"
        state: directory
iquin@workstation:~/CPE212_IQUIN$
```

```

iquin@workstation:~/CPE212_IQUIN$ nano createdirectory.yml
iquin@workstation:~/CPE212_IQUIN$ ansible-playbook createdirectory.yml --ask-pass
SSH password:

PLAY [Create a directory] *****

TASK [Gathering Facts] *****
ok: [192.168.56.123]
ok: [192.168.56.121]

TASK [Create ansible-directory] *****
changed: [192.168.56.123]
changed: [192.168.56.121]

PLAY RECAP *****
192.168.56.121      : ok=2    changed=1    unreachable=0    failed=0    s
kipped=0    rescued=0    ignored=0
192.168.56.123      : ok=2    changed=1    unreachable=0    failed=0    s
kipped=0    rescued=0    ignored=0

SSH password:
192.168.56.121 | CHANGED | rc=0 >>
drwxrwxr-x 2 iquin iquin 4096 Sep  8 03:54 ansible-directory
192.168.56.123 | CHANGED | rc=0 >>
drwxrwxr-x 2 iquin iquin 4096 Sep  8 03:54 ansible-directory
iquin@workstation:~/CPE212_IQUIN$

```

Part V – Deleting a File or Directory

Task

Delete the directory created in Part IV.

Playbook

Create:

deletefile.yml

```
- name: Delete a directory
  hosts: all
  tasks:
    - name: Remove ansible-directory
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/ansible-directory"
        state: absent
```

Execute

ansible-playbook deletefile.yml

Verify

ls -ld ~/ansible-directory

The directory should no longer exist.

Required Screenshots

Screenshot 9: Playbook.

Screenshot 10: Execution and verification showing that the directory has been removed.

```
iquin@workstation:~/CPE212_IQUIN$ cat deletefile.yml
---
- name: Delete a directory
  hosts: all
  tasks:
    - name: Remove ansible-directory
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/ansible-directory"
        state: absent
iquin@workstation:~/CPE212_IQUIN$
```

```
iquin@workstation:~/CPE212_IQUIN$ nano deletedefile.yml
iquin@workstation:~/CPE212_IQUIN$ ansible-playbook deletedefile.yml --ask-pass
SSH password:

PLAY [Delete a directory] *****

TASK [Gathering Facts] *****
ok: [192.168.56.121]
ok: [192.168.56.123]

TASK [Remove ansible-directory] *****
changed: [192.168.56.123]
changed: [192.168.56.121]

PLAY RECAP *****
192.168.56.121 : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0
192.168.56.123 : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0

iquin@workstation:~/CPE212_IQUIN$ ansible all -a "ls -ld ansible-directory" --ask-become-pass
BECOME password:
192.168.56.123 | FAILED | rc=2 >>
ls: cannot access 'ansible-directory': No such file or directorynon-zero return code
192.168.56.121 | FAILED | rc=2 >>
ls: cannot access 'ansible-directory': No such file or directorynon-zero return code
iquin@workstation:~/CPE212_IQUIN$
```

Observation

What does state: absent do when the specified file or directory exists? What happens if it does not exist?

- When the specified file or the directory exists the state: absent deletes it for directories, this is a recursive delete its basically removing all contents inside it as well.

Part VI – Changing File Permissions

Task

Create a file and change its permissions to:

0644

Playbook

Create:

filepermissions.yml

- name: Change file permissions

hosts: all

tasks:

- name: Create permission test file

ansible.builtin.file:

path: "{{ ansible_env.HOME }}/permission_test.txt"

state: touch

mode: '0644'

Execute

ansible-playbook filepermissions.yml

Verify

ls -l ~/permission_test.txt

You should see permissions similar to:

-rw-r--r--

Required Screenshots

Screenshot 11: Playbook.

Screenshot 12: ls -l showing the resulting permissions.

```

iqin@workstation:~/CPE212_IQUIN$ cat filepermissions.yml
---
- name: Change file permissions
  hosts: all
  tasks:
    - name: Create permission test file
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/permission_test.txt"
        state: touch
        mode: '0644'
iqin@workstation:~/CPE212_IQUIN$

iqin@workstation:~/CPE212_IQUIN$ ansible-playbook filepermissions.yml --ask-pass
SSH password:

PLAY [Change file permissions] *****

TASK [Gathering Facts] *****
ok: [192.168.56.123]
ok: [192.168.56.121]

TASK [Create permission test file] *****
changed: [192.168.56.123]
changed: [192.168.56.121]

PLAY RECAP *****
192.168.56.121      : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0
192.168.56.123      : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0

Expanded Security Maintenance for Applications is not enabled.

137 updates can be applied immediately.
102 of these updates are standard security updates.
To see these additional updates run: apt list --upgradable

Enable ESM Apps to receive additional future security updates.
See https://ubuntu.com/esm or run: sudo pro status

Last login: Tue Sep  8 04:57:13 2026 from 192.168.56.104
iqin@server1:~$ ls -l ~/permission_test.txt
-rw-r--r-- 1 iqin iqin 0 Sep  8 04:05 /home/iqin/permission_test.txt
iqin@server1:~$

```

Observation

What did mode: '0644' do to the file's permissions?

- The mode 0644 i think gave the file permission to read write etc. It means that the owner can read and write the file while the others there can only view it.

Part VII – Changing Owner and Group

Perform this activity only if your laboratory environment allows you to use become: true.

Task

Create a directory and set its owner and group to root.

Playbook

Create:

ownership.yml

- name: Change ownership and group
 - hosts: all
 - become: true
 - tasks:
 - name: Create ownership test directory
 - ansible.builtin.file:
 - path: /tmp/ansible-ownership-test
 - state: directory
 - owner: root
 - group: root
 - mode: '0755'

Execute

ansible-playbook ownership.yml

Verify

ls -ld /tmp/ansible-ownership-test

Required Screenshots

Screenshot 13: Playbook.

Screenshot 14: Verification showing the owner and group.

```
iquin@workstation:~/CPE212_IQUIN$ cat ownership.yml
---
- name: Change ownership and group
  hosts: all
  become: true
  tasks:
    - name: Create ownership test directory
      ansible.builtin.file:
        path: /tmp/ansible-ownership-test
        state: directory
        owner: root
        group: root
        mode: '0755'

iquin@workstation:~/CPE212_IQUIN$
```

```
iquin@workstation:~/CPE212_IQUIN$ ansible-playbook ownership.yml --ask-pass --ask-become-pass
SSH password:
BECOME password[defaults to SSH password]:

PLAY [Change ownership and group] *****

TASK [Gathering Facts] *****
ok: [192.168.56.123]
ok: [192.168.56.121]

TASK [Create ownership test directory] *****
changed: [192.168.56.123]
changed: [192.168.56.121]

PLAY RECAP *****
192.168.56.121      : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0
192.168.56.123    : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0
```

Observation

What effect did the owner and group parameters have on the directory?

- The effect that happened is the owner which is root of the system and the group which is also root changed the directory ownership so that the root user and root group have admin control over it.

Part VIII – Using Symbolic Permissions

Task

Change the permissions of a directory using symbolic notation instead of octal notation.

Set the permissions to:

u=rwx,g=rx,o=rx

Playbook

Create:

symbolicpermissions.yml

```
- name: Set symbolic permissions
  hosts: all
  tasks:
    - name: Create symbolic permission directory
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/symbolic-test"
        state: directory
        mode: 'u=rwx,g=rx,o=rx'
```

Execute

ansible-playbook symbolicpermissions.yml

Verify

ls -ld ~/symbolic-test

The resulting permission should be equivalent to:

0755

Required Screenshots

Screenshot 15: Playbook.

Screenshot 16: Verification showing the permissions.

```
iquin@workstation:~/CPE212_IQUIN$ cat symbolicpermissions.yml
---
- name: Set symbolic permissions
  hosts: all
  tasks:
    - name: Create symbolic permission directory
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/symbolic-test"
        state: directory
        mode: 'u=rwx,g=rx,o=rx'
```

```
iquin@workstation:~/CPE212_IQUIN$ nano symbolicpermissions.yml
iquin@workstation:~/CPE212_IQUIN$ ansible-playbook symbolicpermissions.yml --ask-pass
SSH password:

PLAY [Set symbolic permissions] *****

TASK [Gathering Facts] *****
ok: [192.168.56.123]
ok: [192.168.56.121]

TASK [Create symbolic permission directory] *****
changed: [192.168.56.123]
changed: [192.168.56.121]

PLAY RECAP *****
192.168.56.121      : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0
192.168.56.123      : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0

iquin@workstation:~/CPE212_IQUIN$
iquin@workstation:~/CPE212_IQUIN$ ansible all -a "ls -ld symbolic-test" --ask-pass
SSH password:
192.168.56.123 | CHANGED | rc=0 >>
drwxr-xr-x 2 iquin iquin 4096 Sep  8 06:24 symbolic-test
192.168.56.121 | CHANGED | rc=0 >>
drwxr-xr-x 2 iquin iquin 4096 Sep  8 06:24 symbolic-test
iquin@workstation:~/CPE212_IQUIN$
```

Observation

How does symbolic permission notation differ from octal notation?

- The octal notation represents the permissions as a set of numeric digits like the previous parts earlier, where the digits are calculated by adding up read which is 4 write for 2 and execute for 1. Its very compact but it requires a lot of converting numbers back into permission meanings.

Part IX – Creating a Symbolic Link

Task

Create a file and then create a symbolic link pointing to that file.

The original file:

~/source_file.txt

The symbolic link:

~/source_link.txt

Playbook

Create:

createsymmlink.yml

- name: Create a symbolic link
hosts: all

tasks:

- name: Create source file
 ansible.builtin.file:
 path: "{{ ansible_env.HOME }}/source_file.txt"
 state: touch

- name: Create symbolic link
 ansible.builtin.file:
 src: "{{ ansible_env.HOME }}/source_file.txt"
 dest: "{{ ansible_env.HOME }}/source_link.txt"
 state: link

Execute

ansible-playbook createsymlink.yml

Verify

ls -l ~/source_file.txt ~/source_link.txt

You should see that source_link.txt points to source_file.txt.

Required Screenshots

Screenshot 17: Playbook.

Screenshot 18: ls -l showing the symbolic link.

```
iquin@workstation:~/CPE212_IQUIN$ cat createsymlink.yml
---
- name: Create a symbolic link
  hosts: all
  tasks:
    - name: Create source file
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/source_file.txt"
        state: touch
    - name: Create symbolic link
      ansible.builtin.file:
        src: "{{ ansible_env.HOME }}/source_file.txt"
        dest: "{{ ansible_env.HOME }}/source_link.txt"
        state: link
iquin@workstation:~/CPE212_IQUIN$
```

```
iquin@workstation:~/CPE212_IQUIN$ ansible-playbook createsmylink.yml --ask-pass
SSH password:

iquin@workstation:~/CPE212_IQUIN$
```

Observation

What is the purpose of src, dest, and state: link when creating a symbolic link?

- The src specifies the path to the original or the existing file, the dest specifies where the symbolic link is created and the name of the file, and the state: link tells the builtin module that the task should create a symbolic link.

Part X – Deleting a Symbolic Link

Task

Delete the symbolic link created in Part IX.

Playbook

Create:

deletesymlink.yml

```
- name: Delete a symbolic link
  hosts: all
  tasks:
    - name: Remove symbolic link
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/source_link.txt"
        state: absent
```

Execute

ansible-playbook deletesymlink.yml

Verify

ls -l ~/source_file.txt ls -l ~/source_link.txt

The source file should remain while the symbolic link should be gone.

Required Screenshots

Screenshot 19: Playbook.

Screenshot 20: Verification showing that the symbolic link was removed.

```
iquin@workstation:~/CPE212_IQUIN$ cat deletesymlink.yml
---
- name: Delete a symbolic link
  hosts: all
  tasks:
    - name: Remove symbolic link
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/source_link.txt"
        state: absent
iquin@workstation:~/CPE212_IQUIN$
```

```
iquin@workstation:~/CPE212_IQUIN$ nano deletesymlink.yml
iquin@workstation:~/CPE212_IQUIN$ ansible-playbook deletesymlink.yml --ask-pass
SSH password:

PLAY [Delete a symbolic link] *****

TASK [Gathering Facts] *****
ok: [192.168.56.123]
ok: [192.168.56.121]

TASK [Remove symbolic link] *****
changed: [192.168.56.121]
changed: [192.168.56.123]

PLAY RECAP *****
192.168.56.121      : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0
192.168.56.123      : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0

Some actions do not make sense in Ad-Hoc (include, meta, etc)
iquin@workstation:~/CPE212_IQUIN$ ansible all -a "ls -l source_file.txt" --ask-pass
SSH password:
192.168.56.121 | CHANGED | rc=0 >>
-rw-rw-r-- 1 iquin iquin 0 Sep  8 06:32 source_file.txt
192.168.56.123 | CHANGED | rc=0 >>
-rw-rw-r-- 1 iquin iquin 0 Sep  8 06:32 source_file.txt
iquin@workstation:~/CPE212_IQUIN$ ansible all -a "ls -l source_link.txt" --ask-pass
SSH password:
192.168.56.123 | FAILED | rc=2 >>
ls: cannot access 'source_link.txt': No such file or directorynon-zero return code
192.168.56.121 | FAILED | rc=2 >>
ls: cannot access 'source_link.txt': No such file or directorynon-zero return code
iquin@workstation:~/CPE212_IQUIN$
```

Observation

What happened to the original source file when the symbolic link was deleted?

- So original source file the txt remained like unedited or untouched after the symbolic link was deleted. Its because the link is just the pointer to the file location.

Part XI – Modifying File Timestamps

Task

Create a file and modify its access and modification time.

Playbook

Create:

filetime.yml

```
- name: Modify file timestamps
  hosts: all
  tasks:
    - name: Create timestamp test file
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/timestamp_test.txt"
        state: touch
        access_time: now
        modification_time: "202609080800.00"
```

Execute

ansible-playbook filetime.yml

Verify

ls -l --full-time ~/timestamp_test.txt

Required Screenshots

Screenshot 21: Playbook.

Screenshot 22: Verification showing the timestamp.

```
iquin@workstation:~/CPE212_IQUIN$ cat filetime.yml
---
- name: Modify file timestamps
  hosts: all
  tasks:
    - name: Create timestamp test file
      ansible.builtin.file:
        path: "{{ ansible_env.HOME }}/timestamp_test.txt"
        state: touch
        access_time: now
        modification_time: "202609080800.00"
iquin@workstation:~/CPE212_IQUIN$
```

```
iquin@workstation: ~/CPE212_IQUIN
ls: cannot access 'source_link.txt': No such file or directory
non-zero return code
iquin@workstation:~/CPE212_IQUIN$ nano filetime.yml
iquin@workstation:~/CPE212_IQUIN$ ansible-playbook filetime.yml --ask-pass
SSH password:

PLAY [Modify file timestamps] *****

TASK [Gathering Facts] *****
ok: [192.168.56.123]
ok: [192.168.56.121]

TASK [Create timestamp test file] *****
changed: [192.168.56.123]
changed: [192.168.56.121]

PLAY RECAP *****
192.168.56.121      : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0
192.168.56.123      : ok=2    changed=1    unreachable=0    failed=0    skipped
=0    rescued=0    ignored=0

Some actions do not make sense in Ad-Hoc (include, meta, etc)
iquin@workstation:~/CPE212_IQUIN$ ansible all -a "ls -l --full-time timestamp_test.txt" --ask-pass
SSH password:
192.168.56.123 | CHANGED | rc=0 >>
-rw-rw-r-- 1 iquin iquin 0 2026-09-08 08:00:00.000000000 +0000 timestamp_test.txt
192.168.56.121 | CHANGED | rc=0 >>
-rw-rw-r-- 1 iquin iquin 0 2026-09-08 08:00:00.000000000 +0000 timestamp_test.txt
iquin@workstation:~/CPE212_IQUIN$
```

Observation

What happened to the file's access and modification times after running the playbook?

- What happened to the file is that the access time was updated to reflect the current time when the playbook was actually executed since the access time is now it tells the ansible to set it to the moment the task runs. Basically its modification of the time which is sept 8 2026 at 8:00:00.

2. ANSWERS TO SUPPLEMENTAL ACTIVITY

Copy and paste the questions from the lab and include your answers after.

3. ARTIFICIAL INTELLIGENCE (AI) USE DISCLOSURE STATEMENT

I hereby declare that artificial intelligence (AI) tools were used, if applicable, in the preparation of this academic work. The following indicates the nature and extent of AI assistance:

Tools Used:

COMPUTER
ENGINEERING

QUEZON CITY

Examples: ChatGPT, Microsoft Copilot, Grammarly, QuillBot, etc.

Purpose of Use:

Examples: grammar correction, idea generation, formatting, summarization, code assistance, explanation of concepts, etc.

Gemini, quillbot

Extent of Use:

Explain how AI was used and confirm that it did not replace original thinking, analysis, authorship, or completion of the required work.

- **These were used to check my grammatical error and fixing my sentences.**

By submitting this activity, I affirm that my use of AI complies with T.I.P.'s AI usage policy and does not exceed the permitted limits for similarity, automated content generation, or academic assistance.

I understand that any false, incomplete, or misleading disclosure may be subject to investigation in accordance with due process and may result in sanctions for violation of existing T.I.P. policies.

Lab activities, templates, and related instructional materials shall not be reuploaded, reproduced, distributed, or shared with external organizations or third parties without the prior express written permission of the Technological Institute of the Philippines.
